

Omnidirectional Vision Systems: Calibration, Feature Extraction and 3D Information

Filesize: 7.11 MB

Reviews

A really wonderful book with lucid and perfect reasons. This can be for all who statte there was not a worth reading through. You are going to like how the author write this book.

(Dr. Grady Jacobi DDS)

OMNIDIRECTIONAL VISION SYSTEMS: CALIBRATION, FEATURE EXTRACTION AND 3D INFORMATION

Springer. Paperback. Condition: New. 122 pages. Dimensions: 9.2in. x 6.1in. x 0.3in. This work focuses on central catadioptric systems, from the early step of calibration to high-level tasks such as 3D information retrieval. The book opens with a thorough introduction to the sphere camera model, along with an analysis of the relation between this model and actual central catadioptric systems. Then, a new approach to calibrate any single-viewpoint catadioptric camera is described. This is followed by an analysis of existing methods for calibrating central omnivision systems, and a detailed examination of hybrid two-view relations that combine images acquired with uncalibrated central catadioptric systems and conventional cameras. In the remaining chapters, the book discusses a new method to compute the scale space of any omnidirectional image acquired with a central catadioptric system, and a technique for computing the orientation of a hand-held omnidirectional catadioptric camera. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
